Merlinus Liberatus : 755. 23

BEING AN
ALMANACK

For the Year of our Redemption *pp. 2465*

1735

It being Third after *Bissextile*, or *Leap-Year*.

And from the Creation of the World, according
to the best of *Prophane History*, 5684.

And the 46 of our Deliverance by *R. William*,

from *Popery*, and *Arbitrary Government*.

But the 39 from the

Horrid, Popish, High-Church, Jacobite Plot.

In which are contain'd the diurnal Motions of the Plan-
ets, Conjunctions, Lunations, Eclipses more large and
exact than in any other of this Kind. *Astrological*
Observations on the Twelve Months, and on the four
Quarters of the Year, Terms, Tides, Equation of
Clocks, and other Things fit for such a Work.

To which is prefix'd

The Protestant Remembrancer continued.

Calculated and reterr'd to the Meridian of *London*,

Whose Latitude is $51^{\circ} 32'$ North.

By JOHN PARTRIDGE.

— *Etiam Mortuus Loquitur.* —

LONDON: Printed by R. PHILLIPS, for
the Company of STATIONERS.

The INTRODUCTION.

Forbear great *Mars*, let Peace be thy Desire,
Left Life and Fame both by the Fates expire.
Thy Predecessor dy'd at Forty One,
And thou art now to that same Station come.
Time's trembling Hand submits to Heaven's Laws,
And, like a grave Musician, puts a Pause
In Nature's Hermony, such Chances fall
From poysonous Atoms, Epidemical.
An angry *Mars*, the modest Maid abuses,
While Mother *Luna* her Affront espouses.
These may agree and so contrive a Vail,
To hide the Hand that wounds the Scorpion's Tail.
Stilbon's a Wit, yea, and a Gowns-man, who
Is Knave enough to prove a Traitor too.
The drooping Lilly hates the parching Sun,
The morning Frost, and the hot Afternoon.
Most cruel Fate, that hath Respect for neither,
But at one Blow strikes Root and Branch together.
The swiftest Fish drives at his tim'rous Prey,
And dreads no Anger in the troubled Sea.
The Crown's the Victor's Triumph; Fate proclaims
Pompey must die if ever *Cæsar* reigns.
But Plots may vanish, furious Stars may set,
Yet none but Heaven can reclaim this Fate.
But if these Storms pass o'er, here lies the Main,
This hec't'ring Cock will surely crow again.
The Cock and Eagle then breaks A p'ity;
The Lyon and the Lilly can't agree.
The Leopard stands amaz'd, and dreads his Fate;
When Blood bestains the Waves, great Fleets retreat
Let these be foreign Fears, whilst I with you,
Pray for my Sov'reign, and his Subjects too.

The Protestant Remembrancer continued.

WILL you now dare to trust your deceitful Eyes before an infallible Pope? What Infidels are these Protestants? But still you proceed in your Obstinacy to wrangle. If indeed this were the Judgment only of two or three purblind Hereticks, it were another Matter, it may be they cannot see so far into a Millstone, as our Eagle-ey'd Catholicks, assisted with that famous Microscope of implicit Faith: But when all Mankind, Turks, Jews, Heathens, shall say, and if need were, swear too, that it is but Bread still, must we reproach our Faculties, and put an Affront upon our Senses to please and humour their Worshipps?

But that which heightens the Delusion of these Hugonots, is, that whereas the best Evidence and Assurance we have for the Sun shining at Noon, is from the Testimony of one single Sense, we have the concurrent Suffrage of all our Senses, and that too when best qualified at a due Distance in a fit Medium, upon their proper Objects; pray try them all one after another, smell to it, what says your Nose, is it fusty, or no? What says your Hands? Feel it well; What says your Ears? Grate it; what says your Palate? Taste it; why really they all inform me, *Nemine contradicente*, when all the I's and No's are exactly counted that it's Bread still, and by Consequence that Transubstantiation is the most impudent Falshood, that ever defy'd the universal Sentiments of a reasonable Creator, whose Understanding is capable of examining the Reports of the outward Sensories.

But the Priest will tell you, that after all this, That it is a great Miracle, a tremendous Mystery, and therefore, in this Case, the Senses are not legal Witnesses, to give Evidence, nor good Men and true to bring in a Verdict, nor competent Judges to pass a definitive Sentence upon a Matter of Fact. Really it is a huge Privilege, a rare Happiness, which our Catholicks have acquired to be wiser than Christ.

To be continued.

Monthly Observations.

The Season of the Year
 admits of no great Matter of
 Action in *Europe*, but many
 and serious Consultations :
 The Commonalty willing to
 pry into their serious Con-
 sults, but are not found wor-
 thy : Authority lately vex-
 ed with too; too urgent Pe-
 titions, or pestered with
 Pamphlets; Domestick Dif-
 ferences and civil Controver-
 sies seem some-what appea-
 sed, or at least little talked
 of. The *Muscovite* may just-
 ly fear the Invasion of some

The 20th Day of this
 Month, 1706, was born
 His Royal Highness *Fre-
 derick*, Prince of *Wales*.

potent Foe, perhaps her *Tar-
 tarian* Neighbour.

February hath XXVIII Days:

To *Pluto* (yea, that grand Apostate) now
Rome Sacrifice, and consecrate a Vow.
 With burning Tapers, fain she would affright
 Heavens Vengeance, and anticipate the Night.
 Alas, alas, her Wo's began in *France*,
 The Stage is built for an *Italian* Dance.

Monthly Observations.

Behold! Good Reader,
 such a Crowd of amicable
 Aspects has not often been
 seen in one Month: Certain-
 ly now more than ordinary
 Matters are about this Time
 brought upon the Carpet
 towards a Reconciliation of
 Matters of great Moment.
 But *Mars* changes his Quar-
 ter and hastens to salute old
Saturn in *Ireland's* Horos-
 cope, entertain'd by *Venus*,
 who is in Consultation with
 thievish *Mercury*; this bodes
 many Robberies and Blood-
 shed committed amongst
 themselves. For in *March*
 last, as soon as η had entered

The 22 Day of this
 Month, 1722, was born
 the Princess *Mary*.

We heard of the Murder
 of the Reverend Mr. *Ford*.

March hath XXXI Days.

*Jove Squares with Venus, Hermes courts the Sun,
And smiles to see how Court-like all Things run.
What plum'd Complements hover in the Sky,
Projects clandestine, and base Flattery.
Not Poland, France, nor the Spaniard durst,
But England's Home-bred Foes are still the worst.*

June hath XXX Days.

Now *Titan* with his fiery darting Beams
Doth scorch the Hills and dry the pleasant Streams:
Our Bodies eke inflamed are with heat,
French Wine is not so good as *English Meat*;
When both these meet, the one Concoction helps,
The last gives Strength against the *Romish Whelps*.

Monthly Observations

Great Hurliburlies both in City and Country, much Cheating and Knavery acted under the Shew of Religion, many are detected about this Time for clandestine

On the 21th of this Month, 1727 was His present most Gracious Majesty's Accession to the Throne; and on the 15th day he was proclaimed King of Great-Britain, &c. whom God grant long to reign;

fine and under-hand Dealing. One of the long Robe affronts his Prince, and is called to Account; the Turk seems uneasy; the Poles not satisfied, whilst the French and Spaniard are enlarging their Dominions, England be watchful.

July hath XXXI Days.

This Month beginning the Heav'ns seem to agree,
 Pacifick Terms they use, and why not we?
 We would if wise, but 'twill not be before,
 That Winds forbear to storm, and Seas to roar.
 Thus feigned Friends never appear but when,
 You are advanc'd to be Earth's mighty Men.

Monthly Observations

Mars now transits *Rome's* Horoscope, it would dowell if the Holy Father would advise with his Physicians whether he had best bleed or purge e're the Dog-days come. Ambiguous Intelligence arrives from several Parts of *Europe*. *Jupiter* is still Retrograde, in some Places the too forward Clergy receives a Curb: *Mercury* is very busy, we hear of the Death of some eminent Person; Letters from *Germany* and places adjacent giving us a more particular Account, *Ireland* uneasy, *Scotland* well satisfied.

August hath XXXI Days.

Malignants now in Square Aspect do stand,
 Whilst Royal Sol with *Mars* walks Hand in Hand,
 In *Hermes* Court, all Friendship there condole,
 When fiery-flashing *Mars* cast in a Coal;
 Which burns their Plumes and Coats all lac't about,
 Now Court-like Queens from Court, they all must out.

Monthly Observations

Now what was long expected is come to a Crisis, the two grand Ambassadors of Heaven are at Odds, the *Austrian* Family elevated unto a high Pitch of Consultation, sublime and lofty Undertakings suddenly follow, most States and Princes of *Europe* have an Eye to their proceeding, *France* look out, *Mars* comes to salute thee with Sword in hand, he has some valiant Exploits before him, Time will determine whether he will stand thy Friend or Foe: False Coiners, Cheaters, and such Rascals as busily as may be; I hope Justice will make some of 'em exemplary: Idle and vain Pamphlets are dispersed abroad to the great Dishonour of our holy Religion and happy Constitution.

September, 1735.

New Moon 5 day, 5' past 4 Afternoon.

First quarter 12 day, 41' past 9 Night.

Full Moon 21 day, 19' past 1 Morning.

Last quarter 28 day, 19' past 9 Morning.

See ♃ S.E. and ♀ S.W. after Sun-set, at the Beginning of the Month.

Monthly Observations

If *Fesse* and *Algires* be under *Scorpio*, as Authors affirm, then we fear those Rovers will about this time disturb our Navigation, our Merchants mourn for the Loss of many a brave Cargo, and the Women lament the great Misfortunes of their dear Husbands being carried into Slavery.

Mars now enters *Libra*, and bids those Places under that Sign beware of his Fury in *Austria*, *Livonia*, and *Alsatia*, there is an Appearance of much Trouble, 'tis probable, that some dismal Disaster, is ready to break forth in those Parts of the World subject to the airy Triplicity; hot and dry Diseases are in this Month design'd to afflict Mankind.

Add to the equal Time

October hath XXXI Days.

Astrologers (as some abroad do give)
 May many Notions from the Stars receive.
 What if some treacherous Plots afresh begin?
 No Man that's honest will have Share therein;
 The Eye of Heaven sees all Blood-thirsty Men,
 'Scape not unpunish'd, no not One of Ten.

November hath XXX Days.

This is the Month, may't never be forgot,
In which was hatch't the hellish Powder-Plot;
The Month begins, *Sol Saturn* doth oppose,
To raise ill Weather, Storms and Clouds, Frost & snows.
While Man is Man, until that Death bereave
Of his last Breath, his Grief shall never leave.

Here are three Planets
 Retrograde, and *Sol* oppo-
 sed by *Saturn* brings bad

On the 4th Day 1650
 was the brave and honest
K. William III. born for
 the Preservation of these
 Kingdoms from Popery, and
 Protestants from Romish
 Tyranny. His Memory will
 always be dear to these
 three Kingdoms.

News from *Ireland*, I fear
 much Variance, Discord &
 Disention among the Peo-
 ple; *Mars* is now in *M*,
 bids *Spain* look out, and
 maintain thy Ground
 in *Africa*, their Women
 much Grief in Child-bed,
 if not Death: the Courts
 of Princes much frequented
 by Ambassadors, and the
 Grantees fully imploy'd to
 good Purpose.

December hath XXXI Days!

Time and Tide in constant Motion fly,
 Redeem the one, set not the other by.
 All things on Earth Shadows are or Bubbles;
 Still blown and tost in the Wind of Troubles.
 How vainly then do such Men steer their Course,
 Who split their Barks on Shelves by Honour's Force?

PARTRIDGE, 1735.

Astrological Observations on the Year 1735.

Of the Brūmal or Winter-Quarter.

WHich begins at such time as the Sun (apparently) enters the first Scruple of *Capricorn*, and falls this Year 1734, under the Meridian of London (according to the Tables of my Astronomical Friend, Mr. *Charles Leadbater*, which are sold by Mr. *Wilcox* at *Virgil's Head* in the *Strand*) December 10^d 11^h 43' 43" P. M. at which Time and Place we have 27° of *Virgo* ascending, and 26° of *Gemini* culminating, *Saturn* Retrograde in the 8th near the *Dragon's-Tail*, *Venus* and *Jupiter* conjoyned in the 3^d House in *Square*, to *Mars* in the 6th, in which we also find the *Moon* and *Mercury* Retrograde; the *Sun* in the 4th, and *Mars* in the 6th; thus are the Heavens posited at the Time of this melancholy Ingress. The Days are now the shortest to all People inhabiting the North side of the *Equator*, the Sun has the greatest Declination and Amplitude South, but the least Meridian Altitude to us in *England*, &c. The Nights are now long and cold, and although the Sun be now nearer the Earth than he is *June*, yet it is colder now for two Reasons, (1.) Because his Diurnal Arch is now less than it is in *June*; consequently his Stay above our Horizon is shorter, and therefore has not time to warm the Earth so much as when his Stay is longer, this is plain to every Capacity by Example, for if in an Oven you burn one Fagot, it will not be so hot as when you burn two such Fagots. (2.) The 2^d Reason is, the Solar Rays all come from the Sun to the Earth parallel to each other, therefore in Winter the same quantity of Rays fall upon four times the Space of Earth more than they do in Summer, by reason then the Angle is more acute, which is made by a Ray of Light falling upon our Horizon.

PARTRIDGE, 1735:

Horizon. See Leadbetter's *System of the Planets*. In the above mention'd Scheme all the Planets are under the Earth except *Saturn*, which shews the Actions of Men to be close and subtle. Great Animosities amongst superior Persons, with notable Vexations in the Courts of Princes, many discontented Spirits appear disturbing the Magistery of Kingdoms and Nations; the Highways infested with Robbers and Thieves, so that it will be dangerous to travel, both in this, and other Countries. The City of London seems to flourish in her Trade, for *Gemini* her Horizon is now in the *Medium Cæli* of this Figure. France beware, meddle not too far, cut thy Coat according to thy Cloth, lest thou repent when it is too late. Of the four Elements, Water is attributed to this Season; of the Humours, Phlegm, of the Complexions, the cold and moist, and of the Ages of Man, the Decrepit. The Diseases which are incident to Man's Body this Quarter, are Pleurisies, Inflammations of the Lungs, Rheums, Coughs, Head-achs, Catarrhs, Apoplexies, Tumours, &c.

*The great Commander of this Universe,
At whose rebuke the Heavens are all amaz'd,
Can easily infringe what we rehearse,
If at our ugly Sins we stood a gaz'd:
For nothing can his Wrath so soon appease,
As true Devotion join'd with Laud and Praise.*

The Spring-Quarter

BEGINS at such time as the Earth enters the first Scruple of *Libra*, or apparently when the Sun touches the first Point of the Equinoctial Sign *Aries*, and continues while he passes through *Aries*, *Taurus*, and *Gemini*; *Mars*, *Venus*, and *Mercury*, being chief Rulers thereof, which this Year 1735 falls on Monday 46^h 8^m past One o' Clock in the Morning, according

PARTRIDGE, 1735.

ing to the above-mentioned celebrated Tables; at which Time and Place 27° of *Libra* Culminates, and 23 of *Sagittarius* ascends in the East. *Venus* applying to a Conjunction of *Mercury* near *Stationary* in the third, where we also find *Sol* and *Cauda Draconis*, *Saturn* in the *Imum Cæli*, *Mars* in the fifth, *Jupiter* in the Ascendent, and *Luna* intercepted in the Second House of Heaven; here all the Planets are under the Earth, and the *Moon* applying to a Square of *Mars*, a common Sign ascends, but it is of the fiery Triplexity, so that here are two *Angles* moveable, viz. the 10 and 4, and the 1 and 7 common; which intimates a Continuance of various and mutable Counsels tending to several Purposes, but too often and frequent Interruptions, notwithstanding the strong Endeavours and serious Pains of many honest and judicious Patriots in several Kingdoms and Countries to make up Breaches, and reconcile the apparent Controversies now depending amongst the Grandees of Europe.

If the Almighty God hath not determined to put into Execution some farther Vengeance and Calamities against many Nations and People for the Sins both of their Rulers and Subjects, we have great Hopes there may not be so much effusion of Blood this Year as was the last past, for two of the Superior Planets are Angular, viz. *Saturn* and *Jupiter*, *Spain* and her Clergy seem to thrive well; the Horoscope of *Paris* is on the Cusp of the ninth, which denotes her Clergy in a good State as to their Sensual Pleasures: I fear a raging Fever, Small-Pox or Measles, to be predominant in the City of London, for *Gemini* is on the Cusp of the sixth, and *Mercury* Lord thereof stands as one in amaze, till he is saluted by the Queen of Love in the House of *Mars*, applying to *Cauda Draconis*.

*In sanguine Men, and youthful Years,
This Season Nature best appears.*

PARTRIDGE, 1735.

The Summer-Quarter.

THIS Quarter commenceth at the very Moment of Time when the Sun apparently toucheth the first Scruple of the Tropical Sign *Cancer*, making the Days longest, and Nights shortest to all the Northern Inhabitants; at *Berwick upon Tweed* the longest Day is 17^h 18' 24" but at the *Lizard Point* in *Cornwell*, it is only 16^h 3' 40", shorter than it is at *Berwick* by 1^h 9' 44". I make the Lat. of the former 55° 50', and of the latter 49° 55' N. between two which Parallels of Latitude doth *England* lie. The Time of this Ingress falls this Year 1735, on *Tuesday June 10.* 55' 17" past Midnight, at which Time and Place (I mean *London*) 12° *Capricornus* Culminates, and 1° *Taurus* is on the Cusp of the Ascendent, where *Saturn* lyeth lurking, *Jupiter* Retrograde in the 9th, *Moon* in conjunction, with *Mercury* in the 4th applying to *Mars* who is in *Sextile* to *Saturn*, *Venus* in the fifth, and *Jupiter* with *Dragons Head* intercepted in the Sixth House of Heaven, *Cauda Draconis* in the Twelfth; this is the Face of Heaven at the Time of this Ingress, the Angles of the Figure are part fixed and part moveable, four Planets Angular, and the *Moon* strong by House, but *Jupiter* and *Mars* are in their Falls; *Jupiter* is a benevolent Planet, he intimates the Endeavours of many noble minded Persons of great Learning as well as Knowledge in the Affairs of the World; such Persons as these we say should mightily endeavour to qualify or meliorate such Laws or Constitutions of Princes or Countries, as formerly have been excepted against, or at present give Offence: But *Jupiter* being weak, cannot be able to perform what might otherwise be expected from him. *Ireland's* Horoscope ascending, bids those People stand upon their Guard, to defend the Reformed Religion, for it seems as if there were a Plot, or some underhand Contrivance about this

PARTRIDGE, 1735.

Time in hand to disturb the Sons of the Reformed Church; nor is the Synod of the *Moon*, *Mercury*, and *Mars* to be passed by with Silence, which signifies not only Consultations and Debates sharply managed, but also many verbal Conflicts and Actions at Law, rather than those Martial. Old Matters or Grudges are now brought to light and questioned, by which they will procure to themselves a Stone Doublet; for *Aries* is intercepted in the 12th with the *Dragon's Tail*. Great Endeavours are used in *Poland* for the regulating divers Disorders, and the composing of Differences which they have long laboured under, complaining much of their heavy Burdens. Improvements, and other Grievances. What shall we say in this Case? is it Religion that all this Blood shed, Bustle and Stir is about? no, 'tis something else, for do not we see they are all of one Clan that makes this Noise in the World, when they have committed all the Disorder and Barbarity, that 'tis possible for human Creatures to be guilty of; they have no more to do, than to apply to the Pope for Absolution, and then they are all put to rights again. This is a fine Religion indeed! a pure and undefiled one! where neither Blot nor Stain can abide, being as easily taken out by Father Confessor, as a Spot of Grease out of a Garment. This Season by Nature is hot and dry, causing the Humours of Man to be suitable; fats Cattle, and brings all Fruits to Ripeness, increasing the Rich Man's Store, and makes the Earth fat with the Bodies of Men, Women and Children (for there died within the Bills of Mortality 1734 in *Jan.* 2008. in *Feb.* 2149. in *March* 2482. in *April* 1906, and in *May* 2002. in all 10547, to the time of the writing hereof;) by reason of those so many Diseases now subject to Nature, viz. Burning Fevers, Phrenies, Inflammations, Imposthums, Ulcerations of the Lungs and Bladder, Heat in the Reins, the Gonorrhea, Iliack Passions, and such Diseases as proceed from Cholera; the Phlegmatick

Persons do now best enjoy their Health, but the
choleric most subject to Diseases.

*Now Reapers panting both with Heat and Pain,
Wish crooked Razors shave the tusted Plain.*

Booker.

Of the Autumnal or Harvest-Quarter.

THIS Quarter begins when the Sun entereth
the Equinoctial Sign *Libra*, which this Year
at London 'alls on *Friday September 12*, at 55'. 9", past
One o'Clock in the Afternoon, making the Days and
Nights equal all the World over, except under the
Poles: we have 1° of *Scorpio* culminating, and 26
Sagittarius ascending, *Saturn* retrograde in the 5th,
Jupiter intercepted in the Ascendent in Square to
Mercury and *Sol*, who are conjoined in the 9th, inter-
cepted in *Libra* with *Dragon's Head*, *Mars* in the 8th,
Venus in the *Medium Cœli* in *Scorpio*, which is her
Detriment, and *Dragon's Tail* intercepted in the 3d,
thus do the Heavens behold the Earth at the time
above-mentioned; the Planets are all save *Mercury*,
essentially weak, for the *Sun* and *Jupiter* are in their
Fall, the Moon is posited upon the very Cusp of the
Ascendent, which denotes that many hidden Pieces
of Knavery is, or will be near this time brought to
light; the Moon being disposed of by *Jupiter*, argues
much Hypocrisy is now made use of to serve a Turn,
strange News from *Spain*, *France* and *Italy*, we in
England do enjoy both Peace and Plenty, whilst
many other Nations of *Europe* labour under much
Misery, Devastation and Destruction; we desire
God in Mercy would continue this our Happiness
for many Years, and preserve us from such Cala-
mities and Afflictions, which thousands at this time
are forced to suffer. *Ireland* seems discontented,
Poland weary of her heavy Burden, several Princes in

PARTRIDGE, 1735.

Germany not satisfied with some late Proceedings; The *Russians* busy to little purpose; the *Turk* and *Persian* pursuing with Eagerness what they cannot attain: the Season of the Year calls the Armies to their Winter Quarters. we wish it would also call the Sword into the Sheath, that Peace might be universally proclaimed, as well in the *Turks* Dominions as in the Christian, that all Animosities and Disputes might cease, this brings into my Mind a Passage which I read in the *Koran* of *Mohammed* lately published (and sold by Mr. *Wilcox* in the Strand, London.) because this Book may not fall into every one of my Reader's hands, I will give it *Verbatim*. That Impostor tells us Fol. 163, 164, that when he was in Heaven there arose a Dispute before the Throne of God between *Adam* and *Moses*. 'Thou, 'says *Moses*, art *Adam*, whom God created, and animated with the Breath of Life, and caused to be worshipped by the Angels, and placed in Paradise, from whence Mankind have been expelled for thy Fault; whereunto *Adam* answered, thou art *Moses*; whom God chose for his Apostle, and intrusted with his Word, by giving thee the Tables of the Law, and whom he vouchsafed to admit to discourse with himself: How many Years dost thou find the Law was written before I was created? Says *Moses*, 40; and dost thou not find, replied *Adam*, these words therein; and *Adam* rebelled against his Lord and transgressed? which *Moses* confessing, Dost thou therefore blame me? continued he, for doing that which God wrote of me that I should do, 40 Years before I was created; nay, for that was decreed concerning me fifty thousand Years before the Creation of Heaven and Earth. In the Conclusion of which Dispute, *Mohammed* declared that *Adam* had the better of *Moses*.

This

PARTRIDGE, 1735.

This Quarter is by Nature cold and dry, the Phlegmatick Persons now begin to be most uneasy.

*Now that good Husband which due Season takes,
In these three Months, his Tears Provision makes.*

Of the Eclipses of the Sun and Moon, 1735.

Within the Circumference of this Year, there will be four Eclipses, two of each Luminary, and they happen in the following Order.

The first will be of the Moon on Thursday March 17 in the Forenoon; invisible at London as thus appears.

	D.	H.	'	"
Begins 1735, March	26	21	21	16
Ecliptic		22	29	54
Middle		22	37	10
End		23	53	4
Total Duration		2	31	48
Digits eclipsed on the Upper Side	06		4	45

The Eclipse is made in $17^{\circ} 9'$ *Libra*, at the Middle of the time of the Eclipse, the Moon is Vertical to the great Ocean called *Mar del-Zur*, there it will only be seen to the Western Parts of *America*, and to the most Eastern Parts of *Asia*.

The second will be an Invisible Eclipse of the Sun in 2° of *Taurus*, on Friday April 11^d 11^h 54' 28" P. M. the times of the general Eclipse happens thus.

PARTIDGE, 1735.

	D.	H.	'	"
The Eclipse first of all begins ? at Sun Rising 1735. <i>Apri</i> '.	11	9	25	51
Centrally Eclipsed at Sun Rising	10	40	29	
Centrally eclipsed in the Merid.	11	33	36	
The Middle of the Eclipse	11	54	15	
<i>Nonagesima</i> Sun centrally eclipsed	12	1	21	
Central Eclipse ends at Sun Setting	13	11	35	
The Eclipse ends at Sun Setting	14	25	6	
After the <i>Penumbra</i> has spent in ? passing over the Earth.	5	1	16	

This Eclipse begins at Sun Rising, in the Latitude of $40^{\circ} 35'$ South, and Longitude East from London $139^{\circ} 46'$, which Place falls on the Globe about *Van - Diemens Isles*, in the Latitude $57^{\circ} 19'$ S. and Long. $130^{\circ} 22'$ E. the Sun will be centrally eclipsed at his Rising in the unknown Southern Ocean. The Sun will be centrally eclipsed in the Meridian in the Latitude of $34^{\circ} 33'$ S. and Long. $173^{\circ} 37' 20''$ W. this Place falls in the unknown Southern Ocean. The Nonagesimal Sun is Centrally Eclipsed in the Lat. $30^{\circ} 3'$ S. and Long. $163^{\circ} 50'$ W. The Sun goes down Centrally Eclipsed in the Lat. of $29^{\circ} 39'$ S. Long. $115^{\circ} 2'$ West, this falls in the great *Pacific Ocean*. And the final Stroke of the Eclipse is in the Lat. $12^{\circ} 21'$ S. and Long. W. $129^{\circ} 2'$. In the Lat. $1^{\circ} 45'$ N. the Sun's Upper Limb will be touched by the Moon's lower in the Meridian, but the Sun's Lower Limb can no where touch the Moon's Upper. The Central Shade of the Moon passes over the Earth with a Velocity of 37 Miles in a Minute of Time; this Eclipse will scarce be seen any where, by Reason of its remoteness from our *European* Traders.

The Third will be a Partial Eclipse of the Moon, and Visible in *England*, if Clouds hinder not; it falls in 8° of *Aries*, and according to a former Calculation of mine falls thus.

Beginning

PARTRIDGE, 1735.

	D.	H.	'	"	
Beginning 1735. Sept.	20	12	16	19	} P. M.
Ecliptic Opposition		13	26	32	
Middle		13	33	27	
End		14	50	35	
Total Duration		2	34	16	
Digits Eclipsed are			5°	37'	0" on the
lower Side of the Moon's Body. At the Middle of					
the Eclipse the is Vertical to the Atlantic Ocean					
West of Guinea; it will be Visible to all Europe,					
Africa and America.					

The fourth and last Eclipse this Year is of the Sun in $22^{\circ} 14'$ *Libra*, Invisible to any Part of Europe, as is shewn by the following Account deduced from Calculation.

The Equal Time of the true Conjunction is October 4^d $14^h 33' 8''$, it will not any where be Total, by reason the Moon's true Lat. is more than the Difference between the Semidiameter of the Earth's Disk and Penumbra. The Eclipse begins at Sun Rising in the Lat. of $40^{\circ} 57'$ N. Long. $94^{\circ} 12'$ E. from London. In the Lat. of $61^{\circ} 32'$ N. and Long. $82^{\circ} 9'$ E. he will be Centrally Eclipsed at his Rising, both these Places fall in *Great Tartary*. The Sun will be Centrally Eclipsed in the Meridian in Lat. $35^{\circ} 5'$ N. and Long. $144^{\circ} 10'$ E. and in the *Nonag-sime* Degree $29^{\circ} 57'$ N. Long. $154^{\circ} 3'$ E. the Sun sets Centrally Eclipsed in the Lat. $29^{\circ} 51'$ N. and Long. $152^{\circ} 59'$ W. But the final Stroke of the Sun is in the Lat. $8^{\circ} 53'$ N. and Long. $170^{\circ} 7'$ W. these four last Places fall in the *Oriental Ocean*. The Sun's upper is just touched by the Moon's lower Limb in the Meridian in the Lat. of 17° S. this Place falls on the Globe between the *Philippian Isles* and *Terra de Papos*.

The Times of the General Eclipse falls thus :

The

beginning

PATRIDGE, 1735.

Venus

PATRIDGE, 1735.

Venus will be elevated above *Saturn* $2^{\circ} 1' 40''$, and will be visible if Clouds hinder not.

On *January* 19. at Three in the Morning, the *Moon* will make a near Appulse to the Planet *Mars*, but not visible at *London*; also on *November* 1 at Two in the Afternoon, the *Moon* will pass under that Planet very near to him. And on *July* 4, at Nine at Night the *Moon* will eclipse the Planet *Saturn*.

Lastly, on *December* 28 at Eleven at Night she will pass under *Venus* very near unto her, but not any of these Phænomena's will be seen in *England*; the *Moon* all the Year passeth very much wide of *Jupiter* above him, as may be seen the 16th of *August* at Eight at Night. Also the *Moon* passeth very much wide of the Planet *Mercury*, but sometimes of one side and sometimes on the other side, as for instance, in *January*, *February*, *April*, *October*, *November*, and *December*, the *Moon* passes above *Mercury*; and the other six Months below him, without coming so near unto him as to hide him from our Sight.

It will be expected I should give my Judgment of the visible Eclipse of the *Moon* *September* 21st. in the Morning. As the Eclipse is small in itself, so its Effects cannot be great; it falls in *Englands* Ascendent, and in the 9th House, *Saturn* retrograde in the 10th in *Trine* to *Mars* in the 2d, *Sol*, *Caput* and *Mercury* in the 3d, *Venus* in the 4th, and *Jupiter* in the 5th, *Leo* ascends, and *Taurus* culminates; thus doth the Heavens behold the Earth at the time of the Middle of this Eclipse, *Mars* being Lord of the Eclipse, the Effects will participate much of his Nature; the Angles of the Figure are fixed, but the Sign in which the Defect is, is moveable, it signifies many Divisions of the Clergy, and obstinate Hatred and Malice between them, or People pretending to Religion; Tumults and Disturbances there from; it is in the fiery Triplicity, and an Eclipse there, signifies hot and sultry Weather, Coruscations and Claps of Thunder in many Places; many and great Losses

PATRIDGE, 1735.

Losses at Sea, and without doubt, earnest will the Endeavours be of the well minded, and of those that have so deeply shaked in the great Calamities that have attended the Wars and great Distractions of *Europe* for some time last past; and many of the *Grandees* of *Europe* would gladly see a Period and Conclusion of these Calamities. And indeed, were it not for Men in Power, that carry on their own private Ends and Interests: Others fearing their fraudulent and clandestine Practices would come to light and be discovered. *Saturn* throwing his friendly Ray to *Mars*, seems as if some grave Senators were at work to mitigate the great Differences that daily arise in the Courts of *Europe*. But stop my Pen, the Time draws near, I am afraid I shall tire my Readers Patience with these Predictions, therefore let us now go and shew him the more pure Astronomy, in viewing of *Jove* and his grand Court, I mean his four Satellites, how they wait upon their Lord and Master every Evening at Ten o'Clock in the Month of *July* this Year 1735, which Speculation must be exceeding pleasant to the young Student in Astronomy, which by the following Table is shewn how they appear, with their Distance from him in Semidiameters and Decimal Parts of *Jupiter*, and as they will appear through two Convex Glasses, which inverts the Object.

The 1st day of *July*, *Jupiter* is South at 11^h 3^m P. M. and in the *Nonagesime* Degree at 10^h 46' P. M. and the 31st day he is in the *Nonagesime* Degree at 8^h 38', and South at 8^h 51'. The Fourth Satellite passes wide of the Shadow all this Year.

A TABLE

PARTRIDGE, 1735.

DR. Partridge's Night Drops, Night Pills, Matthew's Pill, and his other Medicines of his own preparing, continue to be sold as before by his Widow, at the *Blue Ball* in *Salisbury-street* in the *Strand*.

ARTIFICIAL TEETH, set in so firm as to eat with them, and so exact, as not to be distinguished from Natural: They are not to be taken out at Night, as is commonly suggested, but may be wore Years together: Yet are they so fitted, that they may be taken out and put in, by the Person that wears them, at Pleasure; and are an Ornament to the Mouth, and greatly help'ul to the Speech. Also, Teeth cleaned and drawn, by *John Watts* and *Samuel Rutter*, Operators, who apply themselves wholly to the said Business, and live in *Raguet Court, Fleet-street, London*.

STEEL Trusses for Ruptures, Bag Trusses for fixed Tumours, Back Irons, and other Instruments for the Lame or Crooked: By *Peter Bartlett*, Steel Truss-Maker to the Chest at *Chatham*, for the Help of his Majesty's Seamen; at the *Golden Ball* in *S. Paul's Church-Yard, near Cheap-side, London*.

Persons in the Country, sending their names, and which Side the Rupture is, may be supply'd with the Trusses, and proper Directions.

His Mother, *Mrs. M. Bartlett*, at the *Golden Ball* in *Fleet-street, near Fleet-Bridge*, is skilful in this Business to her own Sex.

THE New Year's-Gift complete. In Six Parts. Composed of Meditations and Prayers for every Day in the Week: With Devotions for the Sacrament, Lent, and other Occasions.

London: Printed for S. Birt at the *Bible and Ball in Ave-Mary Lane,
